

Visualization tool for Marian

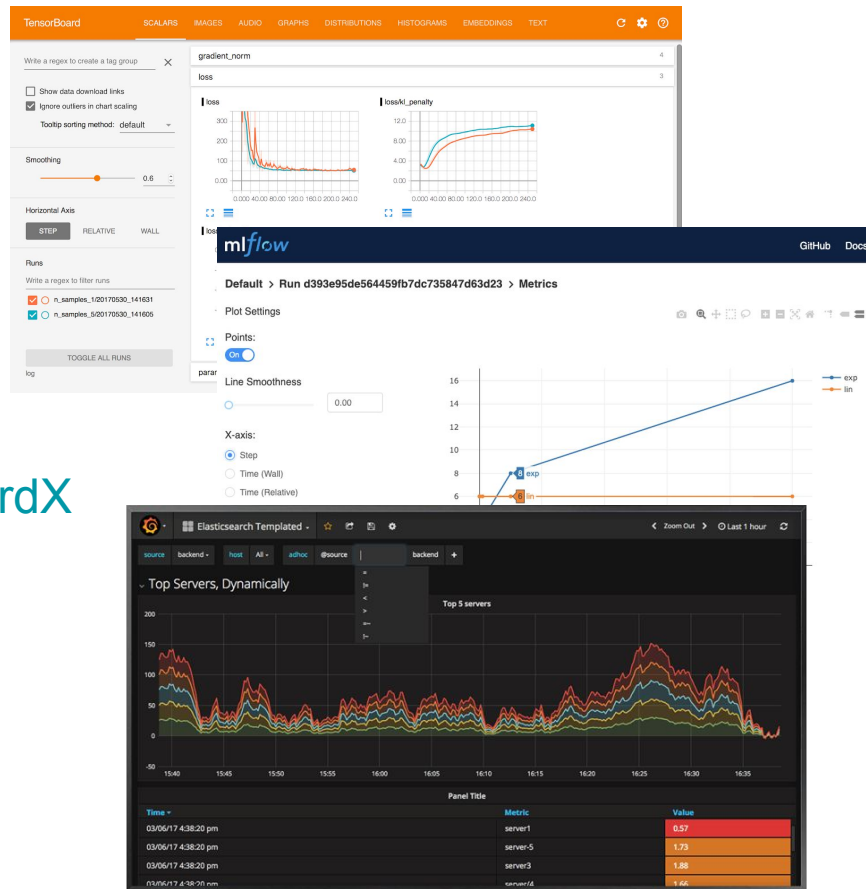

<https://marian-nmt.github.io>

Tomek, Roman, Michal, Marcin x2

Tools

- MLflow
<https://mlflow.org/>
- TensorBoardX
<https://github.com/lanpa/tensorboardX>
- Grafana
<https://grafana.com/>

none is perfect...

Progress

- Testing 3 tools
- System design
 - `marian` (client) sends logs via REST API to `marian-board.py` (server)
 - `marian-board.py` is running TensorBoardX and/or MLflow
- Refactoring logging of training updates in scheduler
- Parser for training logs
- Demos for MLflow and TensorBoardX

Usage

Single machine:

- `./marian-board.py`
- `./build/marian <options> --exp-id ende_123 --board`

Two machines:

- `./marian-board.py --port 2222`
- `./build/marian <options> --exp-id ende_123 --board 321.123.45.6:2222`

Historical experiments:

- `./marian-board-logger.py --exp-id ende_102 --log train.log`

Demos

mlflow

Validation

Extending: Hyperdash

A fun tool for sending logs to your phone:

- Problem
 - unclear security situation / terms of service
- Solution
 - run `marian-board.py` outside corpnet, connect marian to `marian-board.py` securely
